Chief Information Officer

Virginia Department of Health

August, 2015

ConnectVirginia

Health Information Exchange (HIE)

- Sustainability remains a challenge
- Recently met with EPIC hospital CIOs and others to discuss the functionality of the HIE and potential services going forward
- Worked with VCU and other stakeholders recently to submit a grant application for end of life planning which involves connecting the Advance Health Care Directive Registry to the HIE - the grant proposal was received very positively, so we will most likely go forward with this project
- Other HIE services in process: Encounter Alerts, partnership with CRISP to do cross-state alerting, continue to work with DHP on PMP connectivity, Advance Directive Registry, SIM grant - HIT plan, etc.

All Payer Claims Database - Current Status

- Full access to APCD data through the MedInsight Analytics Platform has been provided to participating health plans, hospitals and to the Department of Health
- Participation in the State Innovation Model Grant - APCD data will be used to inform this grant as it pertains to population health and well being
- Data refresh - additional APCD (2nd load) data has been loaded into MedInsight. Claims data from 2 additional data submitters is now included. Several enhancements to the MedInsight platform have also been implemented
- An APCD Advisory Committee meeting will be held on August 26th to discuss a full-blown implementation and marketing strategy going forward

Vital Records/DMV Collaboration

- Phase 2 of this collaboration goes live in late September
- At that time not only birth, but also death, marriage and divorce records will be available from 75 DMV locations and 5 DMV mobile units
- We will utilize the images created through the Ancestry/Vital Records project to inform the second phase of this project
- DMV will utilize a web service to query the Vital Records digital images and if an image is found, a certified copy of the record will be created from this image
- We are working with the Library of Virginia to store and archive these images on their archival system
- Beginning later this year, we will begin moving paper public records to the LVA

VDH Informatics Program

- Continue to work on governance policies
- Data working groups in flight
- Tableau desktop and server – presentation standard
- An Informatics Portal has been implemented within VDH:
 - Informatics policies
 - Data steward information
 - Data catalogue information
 - SIM grant information
 - Population Health Plan for Well Being

SIM Grant

- VDH is responsible for creating a population health plan
- Plan for Well Being
- Second deliverable is the HIT Plan for Virginia - funding may be more likely through DSRIP (delivery system reform incentive program - Medicaid waivers)
- SIM grant plan due end of year
